

The Engineering Institute of Canada

Fellow Citation 2001

Professor Norman C. Beaulieu – A fellow of IEEE Canada

Professor Beaulieu is a graduate of the University of British Columbia, completing a Bachelors, Masters and, in 1986, a PhD in Electrical Engineering. He joined Queen's University as Assistant Professor in 1986 and in 1993 was appointed Professor, Electrical Engineering.

He has had a distinguished academic and professional career as a leader in analysis and modeling of wireless data and digital communication systems. His infinite series method of analysis has developed simple solutions to several previously intractable problems in communication theory. This is a wonderful ability to have, and I am sure his students benefit greatly from this gift, as well as his research work.

He has served on several research panels and Advisory boards, numerous technical program and advisory committees for technical conferences and university committees. He has received a number of awards, for example the Steacie Memorial Fellowship and currently holds the prestigious iCORE chair in Broadband Wireless Communications, at the University of Alberta. (iCORE, for those of you in the audience as uninformed as myself) is the Infomatics Circle of Research Excellence.

Professor Beaulieu is a prolific author with some 61 Journal Papers, 90 conference papers and a number of key technical reports.

Altogether, a worthy recipient of the honour of Fellow of the Engineering Institute of Canada.

Altogether, a worthy recipient of the honour of Fellow of the Engineering Institute of Canada.

Madam President, Professor Norman Beaulieu
