

**Bruce R. Peachey - nominated by the Canadian Society for Chemical Engineering**

Bruce Peachey is the classic Engineer's Engineer. From his graduation from the University of Saskatchewan until today he has involved himself in improving technology and at the same time serving his profession. With Esso Resources he rose to the positions of Technical Services Superintendent at Cold Lake and Senior Facilities Engineering Specialist in Esso's Battle River Operations. In 1991, he started his own company New Paradigm Engineering where he has pursued finding solutions to a range of problems, from downhole oil/water separation to heavy oil vent gas reduction, and has received 5 patents for his work.

Bruce has provided yeoman service to the Canadian Institute of Chemistry (CIC) and CSChE both at the local and national level, and through instruction and mentoring of chemical and petroleum engineering students. He is a Warden and Treasurer of Camp 6 of the Corporation of the Seven Wardens.

Tonight, the EIC is honoured to confer this most deserved accolade.

Ladies & gentlemen and Mr. President, please welcome Bruce Peachey as a Fellow of the Engineering Institute of Canada.
